

## Third Quarter Offerings Wednesdays January 9 - March 6

**Inventive Engineering** - Students in this course will combine all STEM concepts into engaging challenges. Students will design a project, test its success, measure the results, and reflect on the “how” and “why” of what worked and what did not.

**Introduction to Spanish:** Students in this course will find a love for the language of Spanish! Students will be introduced to as much vocabulary as possible and learn the formal structure of the Spanish language!

**Art History and Creations** - Come and explore the arts through a variety of well-known artists. Each class, students will study an artist and complete a work of art using their techniques or style. This course will be two blocks so that students can fully engage in their art, technique, and style.

**Introduction to Computer Programming** - Learn basic computer programming skills using MIT's popular Scratch platform! This course will cover concepts such as animation, object oriented programming, functions, parameters, arguments, bitmaps, vectors, variables, decision structures, repetition structures, event detection, and more.

**Health and Fitness** - Let's have fun in the gym! Join us for a physical fitness program where we partner health education and physical activity.

WEDNESDAY ENRICHMENT COURSES

### Schedule
